## **DETAILED ACTION**

### ***Election/Restrictions***

Restriction to one of the following inventions is required under 35 U.S.C. 121:

- I. Claims 1-5, drawn to a lighting device having controller means for controlling groups of LEDs, classified in class 315, subclass 313.
- II. Claims 6 and 7, drawn to a lighting arrangement having LEDs mounted to circuit boards, classified in class 362, subclass 31.
- III. Claims 8-10, drawn to a computer network controlling the status of LED lighting devices, classified in class 340, subclass 815.44.
- IV. Claim 11, drawn to a dirt detection system for a transparent surface, classified in class 356, subclass 239.8.
- V. Claim 12, drawn to Manipulating light intensity in a tunnel, classified in class 362, subclass 552.

The inventions are distinct, each from the other because:

Inventions I-V are related as combination and subcombination. Inventions in this relationship are distinct if it can be shown that (1) the combination as claimed does not require the particulars of the subcombination as claimed for patentability, and (2) that the subcombination has utility by itself or in other combinations (MPEP § 806.05(c)). In the instant case, the combination as claimed does not require the particulars of the subcombination as claimed because Group I addresses a lighting device with controller means controlling the energized or non-energized light emitting state of LEDs upon a standard luminosity reading or usage time measurement whereas Group III addresses a

computer network determining the status of a plurality of LED lighting devices. The subcombination has separate utility such as indicating which LED lighting device is degraded upon transmitting and receiving information in a room environment. Group II addresses a LED lighting arrangement with separate utility such as being used in a flashlight. Group IV addresses a detection system with separate utility such as detecting dirt from a transparent surface. Group V addresses controlling the luminosity level of the lighting devices by manipulating the light intensity in a tunnel with separate utility such as a diffuser.

Because these inventions are distinct for the reasons given above and have acquired a separate status in the art as shown by their different classification, restriction for examination purposes as indicated is proper.
